https://www.github.com/ahsan7162

Technical Skills

Languages: Python, C#,Go , Javascript, HTML, CSS

Frameworks: .NET6, .NET8, .NET Core, Node.js, React.js, Pandas, Next.js, FASTApi

Libraries: Matplotlib, OpenAI, LLAMA, Pydantic, Scarpy, BeautifulSoup, Jinja2, LangChain, LangGraph

Databases: MySQL, Microsoft SQL Server, Postgres SQL

Version Control: Github, Jira, Microsoft Azure Devops

Experience

Careem Karachi, Pakistan

Software Engineer *October 2025 – Present, Full-time*

- Developed an internal AI agent platform using Go, Python, and React with chat, semantic search, and Slack integration, enabling teams to create, version, and deploy custom AI assistants self-service.
- Scaled the platform to 450+ agents company-wide with multi-target deployment to CI/CD pipelines, Slack channels/threads, and Jira automation, cutting agent build time from 2–3 days to 10 minutes.
- Engineered a partner operations dashboard with DynamoDB, Kafka, OpenSearch, and a React.js microfrontend, giving teams real-time visibility into bookings and walk-in transactions with CSV/Excel export.
- Launched the dashboard during a 2026 campaign (50K bookings), driving adoption from under 2% to 35% while cutting support chat groups from 500+ to under 20 and email queries 70%.
- Resolved a production concurrency race in the booking system by implementing optimistic locking and structured logging, enabling accurate delivery of 50+ partner payouts across 1,500+ transactions.
- Built an in-platform notifications system in Go (Gin, PostgreSQL) with AWS S3/CloudFront media support, reliably delivering product updates and tips to 500+ partners across Careem.
- Modernized a legacy React frontend by upgrading to React 19, migrating tooling, and replacing hand-rolled fetch clients with OpenAPI-generated clients, improving reliability with the first automated unit-test coverage.

Xtel Remote, Italy

Senior Software Engineer *January 2025 – October 2025, Full-time*

- Enhanced anomaly evaluation in documents, reducing processing time by 50% (from 40s to 20s) by eliminating unnecessary save-and-rollback transactions.
- Improved UI field visibility check time from 30s to 100–200ms by removing unnecessary GUI initialization and optimizing calculations.
- Reduced document load time from 250s to 30s by optimizing MARS usage and database access patterns, boosting application performance.
- Optimized a slow-loading operation in Xtel web application by reducing load time from 2 minutes to 30 seconds using Azure SQL Server indexing, pagination, and on-demand data loading
- Resolved high-impact bugs in the web-based .NET Core and React.js application, significantly enhancing system stability and user experience

Astera Karachi, Pakistan

Software Engineer II *March 2024 – Decemeber 2024, Full-time*

- Engineered a scalable marketplace using .NET 8 and React.js enabling users to upload and publish ETL workflows for public access, securing the APIs with JWT and OAuth authentication.
- Built a Python FastAPI server integrating multiple LLM providers (OpenAI, Anthropic, Llama, HuggingFace), with streaming responses, image I/O, and structured request handling via Pydantic.

- Designed multi-step AI execution flows with Jinja2-based prompt generation, streamlining complex prompt orchestration and improving reliability.
- Constructed context-aware AI agents using LangChain and LangGraph, and optimized a RAG pipeline for Astera's flagship product, improving data-retrieval efficiency.

Astera Karachi, Pakistan

Software Engineer I *September 2023 – March 2024, Full-time*

- Developed an enterprise catalog system using .NET 6, C#, and RESTful APIs, implementing role-based access control (RBAC) and secure resource sharing functionality.
- Enhanced data governance by providing users with full control over shared data, accelerating resource sharing by 80%.
- Architected .NET 8 RESTful APIs to integrate with a React-based Data Governance application, ensuring seamless backend-frontend communication.
- Modernized legacy WinForms interface to WPF architecture, implementing responsive design patterns while ensuring backward compatibility and maintaining core functionality.
- Integrated LLM support into our product, developing a .NET Web API backend to enable seamless AI-powered features.

Astera Karachi, Pakistan

Associate Software Engineer *June 2022 – September 2023, Full-time*

- Led product localization for Astera flagship products, enabling multi-language support and expanding global reach while ensuring a seamless user experience.
- Integrated Azure Monitor and Application Insights into our .NET-based product for real-time monitoring and telemetry, reducing troubleshooting time by 30%.
- Created real-time dashboards, implemented alert systems for anomaly detection, and analyzed server requests to enhance performance and ensure smooth application operations.
- Utilized Azure DevOps for version control and product code management, streamlining collaboration and ensuring efficient tracking of code changes and version management.
- Authored and executed unit test cases for new features to validate code reliability, uphold quality standards, and optimize performance before deployment.

Education

NATIONAL UNIVERSITY OF COMPUTER AND EMERGING SCIENCES Karachi, Pakistan

Bachelor of Computer Science CGPA: 3.58/4.00 *August 2018 - June 2022*

Awards & Achievements

- Secured **3rd** place in the Alibaba Cloud Global Challenge among **2,520 teams** for developing an intelligent weather forecasting solution.
- Earned Dean's List honors in four consecutive semesters **(5th to 8th)** for maintaining a GPA of 3.5 or higher.
